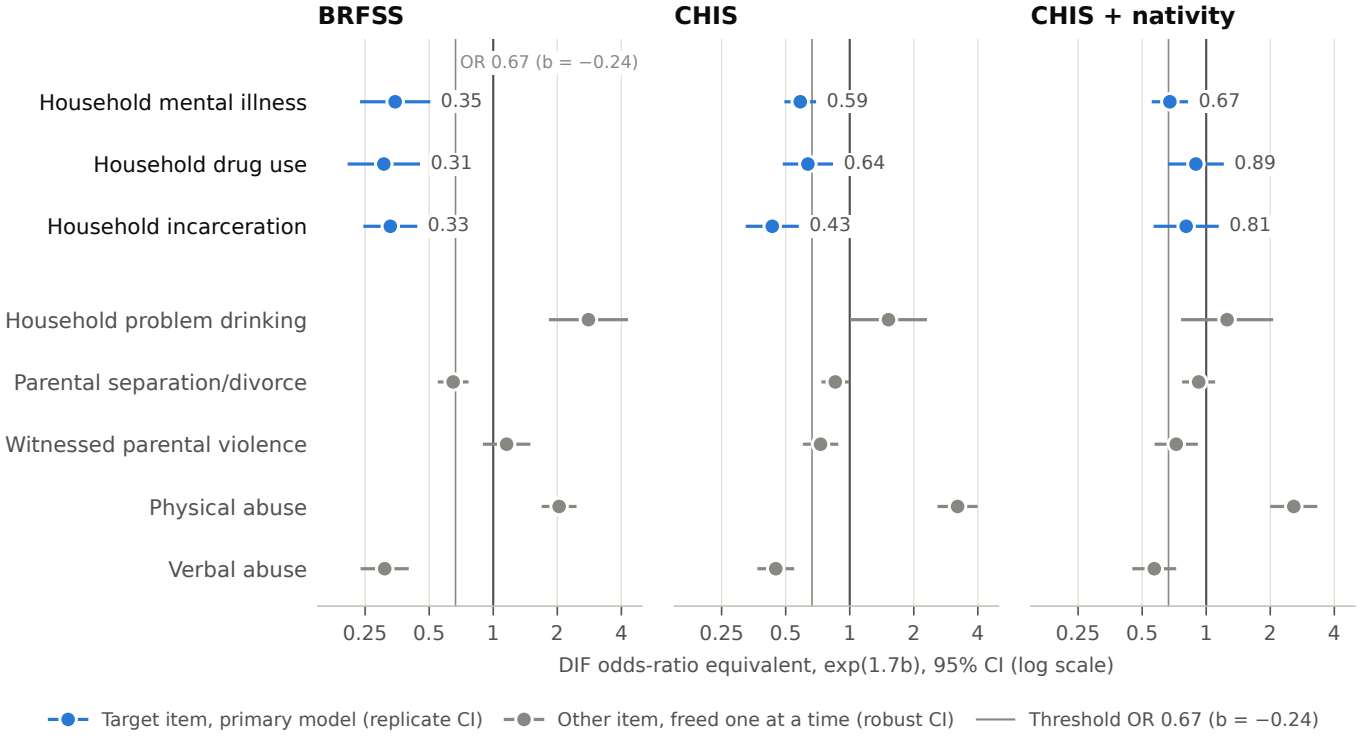
The target items show negative DIF in both surveys (OR-equivalent 0.31–0.64), but so does verbal abuse, and physical abuse is over-endorsed


Uniform DIF by interview language (Spanish vs English), probit MIMIC with covariates; < 1 = less endorsed in Spanish at the same factor level. Non-target items: each freed one at a time (S4c), so their anchors differ from the primary model. CHIS + nativity: S1 covariates.
